Good day, Panelists!

Attached in this email are the revisions for approval of the DCT THES3 Group CSE4 on the thesis entitled: **TARA CUDA: A Hybrid SIMT Implementation of Zhang's Six-Frame Algorithm using CUDA**. We are requesting your approval on our revisions.

We would also like to request sir Greg to provide their e-signature on the panel evaluation form. In the meantime, we have attached a copy of the unsigned document.

If there are any further concerns or revisions required, please let us know.

Thank you!
CSE Group 4

Good day, Panelists!

We would like to follow up on your comments on the revisions performed. Apologies for the inconvenience and thank you for your time.

Sincerely,
CSE 4

the laptop with an NVIDIA RTX 3050 Ti Laptop GPU and Ryzen 7 5800H processor, <--- wouldn't it be called a MOBILE GPU, not a "laptop gpu" <-- such a term is not used in industry

"massive" (overhead, speedup etc) is repeatedly (and excessively) used. Technical writing avoids the use of hyperbole. Please scan whole doc and fix..

Repeated sentences:

p. 84 bottom:

CUDA, however, makes use of a GPU which incurs *massive overhead*, especially across multiple kernel launches and data transfers, making it slower for shorter sequences. For longer sequences however, CUDA can outperform AVX2 since this overhead can be more easily amortized when there is a larger amount of parallel work. fixed-width vector registers for AVX2 which are readily available within the CPU and can

p. 85 top:

be used for parallelization, and the fixed, minimal overhead of AVX2 instructions are easily amortized. CUDA, however, makes use of a GPU which incurs **massive overhead**, especially across multiple kernel launches and data transfers, making it slower for shorter sequences. For longer sequences however, CUDA can outperform AVX2 since this overhead can be more easily amortized when there is a larger amount of parallel work.parallelization, and the fixed, minimal overhead of AV..

While the 3050 Ti Mobile had only 2560 CUDA cores built on the Ampere architecture. <--- this is not a proper sentence!

"compiler optimization plays a significant role in affecting the speed of both the sequential implementation and the CUDA implementation, with some nuances especially with regards to optimizing CUDA..." <--- please fix grammar (2 errors)

7.2 - please stick to 3rd person passive voice, and only switch to active / 1st person IF the former can lead to attribution confusion.

Hello sir Clem! The aforementioned revisions have been performed and highlighted in a darker shade of yellow. The updated document is attached below.

- References to the RTX 3050 Ti Mobile have been correctly changed to Mobile GPU instead of Laptop GPU.
- Usage of hyperbole with the keyword massive has been removed.
- Section on duplicated sentences has been correctly removed.
- Sentences on the GPU specifications were properly connected to form a proper sentence.
- Sentence on compiler optimization was revised completely to improve the flow.
- Active voice sentences in the recommendations were revised.

Please let us know if there are any further concerns.
